INTRODUCTION

The Retina Update meeting is the next evolution of the Imaging Update meeting, and it will take place in Florence, on 14th June 2022.

This new edition aims to translate the research on the latest advances in retinal imaging and therapies into real life clinical practice, adding potential insights for retinal diseases diagnosis and management.

A panel of international experienced ophthalmologists and researchers will share the latest innovations on diagnostics and treatment of the most common retinal diseases and will also discuss on real-world practical considerations as we incorporate these technologies and therapeutic options into our daily clinical practice.

In particular, the program will include presentations on new multimodal retinal imaging (OCT, OCT-Angiography, ultra-widefield fundus imaging) and updates on novel and upcoming treatments for age-related maculopathy, retinal vascular diseases, diabetic macular edema, and retinal inherited disorders.

Join us for our retina meeting, to be up-to-date and to enhance your expertise on the newest retinal imaging technologies and innovative treatments, which can be applied to the diagnosis and management of retinal disorders in clinical practice.
